

PC-4 Gate Arm Light Kit W/Wiring

5-99

Signal

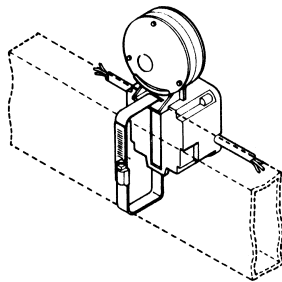

8/99

Safetran has developed a new 4" gate arm light kit that will greatly reduce installation time and replacement cost.

The new model offers a plug and socket connection method which allows identical gate lights to be mounted at any position on the arm. This is accomplished by use of a patented printed circuit board that is mounted inside the terminal box and by the cable end plugs that are used. The only installation requirement is to mount the gate lights and plug them into the ready-made cables. Cable assemblies furnished accommodate arms up to 32 feet. No matter where the gate lights are placed, the tip light will remain on steady and the other two lights will flash alternately.

Mounting of the new gate light on aluminum or fiberglass gate arms is accomplished with a single stainless steel band with a worm gear type clamp that will adjust to any arm section.

Gate light body and terminal box is of one piece UV stabilized polycarbonate construction.

New Stainless Steel Band and Worm Gear Clamp
